

ORION TEAM PRESENTATION

SafeOption AI

Education First. Risk

First.

Multilingual AI Financial Risk Education Platform | Wellington,
NZ

Market Blindness: The Risk Crisis

Millions of beginner retail investors enter complex options markets completely blind to structural structural hazards.

Earnings-Event Risk

Overlooking massive price gaps and sharp volatility shifts post-earnings.

IV Crush Hazards

Sudden drops in Implied Volatility that rapidly erode options contracts value.

Early Assignment Risk

Forced stock acquisition or liquidation loops due to lack of early行权 parameters tracking.

Complex Jargon Barriers

Standard institutional materials lock global retail traders out with English-centric derivatives vocabulary.

Speculation-First vs. Education-First

Trading-First Brokerages

- ✗ **Profit-First Design:** Incentivizes high transaction volumes over protection.
- ✗ **Speculative AI Models:** Encourages fast trading with predictive direction hype.
- ✗ **Opaque Interfaces:** High-risk leverages are wrapped in gamified execution buttons.

SafeOption AI Strategy

- ✓ **Risk-First Awareness:** Enforces cognitive guardrails prior to simulated deployments.
- ✓ **Explainable Learning Models:** AI interprets multi-variable Greeks into plain terms.
- ✓ **Transparent Localization:** Built to empower globally underserved multilingual groups.

"Financial access without financial understanding creates systemic risk."

| Transforming Options Learning

Risk Engine

Advanced calculation pipeline analyzing Break-even thresholds, Max Profit, and Max Loss boundaries dynamically.

Event Safeguards

Proactive scanning layers warning users of upcoming high-danger corporate earnings dates and dividends.

Bilingual Inclusion

Full natural language processing system that deciphers derivatives metrics for both English and Chinese learners.

No earnings date data available

Live Engine Implementation

- ✔ **Real-Time IV Monitoring:** Immediate extraction of Implied Volatility metrics directly from market feeds (e.g., AAPL at 27.6%).
- ✔ **Assignment Risk Awareness:** Visual indicators mapping distance to Strike Price and highlighting safety buffers (e.g., Option OTM by 3.3%).
- ✔ **Event-Driven Warning Systems:** Tracking calendar benchmarks dynamically to flag unknown earnings boundaries.

教育说明

Removing Global Hurdles

- ✔ **Bilingual Educational Delivery:** Seamless conversion of options formulas into simplified, high-readability Chinese translations.
- ✔ **Contextual Warnings:** Dynamic local alerts tracking near-term expiration decay risks (e.g., "距到期仅1天" indicator).
- ✔ **Financial Access Via Literacy:** Scalable backend structure designed to support future global expansion (10+ languages).

Educational Explanation

What Is Sell Put

Selling a put means you may be required to buy 100 shares at \$280.00 if assigned.

Break Even Explanation

Break-even = \$279.99 (strike minus premium).

Max Profit Explanation

Max profit = $0.01 / \text{share}$ (1.00/contract).

Max Loss Explanation

Max theoretical loss = \$279.99/share if the stock goes to zero.

General Warning

Educational purposes only. Selling options requires capital and risk control.

AI Plain-Prose Translation

- ✓ **Drop-Down Explanations:** Demystifies the underlying mathematics behind complex contract parameters.
- ✓ **Guardrails First:** Reminds the user of capital lockup requirements and leverage definitions step-by-step.
- ✓ **Safety Over Hype:** Promotes protective capital preservation strategies rather than trading speed.

"AI should help users understand financial risk — not simply trade faster."

Responsible AI Philosophy

NO Automated Trading

Zero execution capabilities or direct brokerage interfaces to completely eliminate impulsive gamble-loops.

NO Brokerage Connections

Operates completely independent of third-party transaction commissions, ensuring unbiased educational focus.

NO Speculative Advice

Provides robust analytical risk modeling and conceptual metrics rather than predictive stock-direction picking.

Scalable Growth Ecosystem

Phase 1: MVP Core

Options risk calculation engine with dynamic bilingual English & Chinese interface delivery.

Phase 2: Asset Multiplier

Deploying specialized model engines to track Futures, Forex, CFDs, and multi-leg strategies.

Phase 3: Global Network

Building a globally-scalable, multi-language financial risk literacy framework for modern retail investors.

LET'S BUILD A SAFER FINANCIAL FUTURE TOGETHER

"AI should help people understand financial risk — not simply trade faster."
